## ECONOMIC DEVELOPMENT

3. *Indian economy in transition: Essays in honour of C.T. Kurien / edited by S. Janakarajan, L. Venkatachalam, and R. Maria Saleth.. - New Delhi: Sage Publications, 2015. xvii,363; ISBN : 978-93-515-0045-2. 330.954 J25I Q5 49438*

**Book Description:** Although India's growth experience is well documented, the issues and implications that have emerged both in the general and at the sectoral contexts during and after the transition process remain a major area for policy concern. This volume, published in honour of C.T. Kurien, provides a scholarly assessment of India's growth performance and its implications over the last decade and a half.

Examining the key features of India's economic development, the volume addresses critical issues such as food inflation, agricultural performance, labour markets, social infrastructure, climate change, governance, poverty and disparity. It showcases the mutual impacts of economic growth on society and ecosystem. The volume identifies the growing problems of farmers' suicide, food and labour insecurity, corruption, governance gap, caste discrimination and environmental degradation, among others, as key challenges of Indian democracy, suggesting policy changes and governance reforms both in the national and sectoral contexts.

**ISBN : 978-1-51359-954-0.**

**330.9 In8W Q6**

**I1726**

**Book description:** According to the October 2016 "World Economic Outlook," global growth is projected to slow to 3.1 percent in 2016 before recovering to 3.4 percent in 2017. The forecast, revised down by 0.1 percentage point for 2016 and 2017 relative to April's report, reflects a more subdued outlook for advanced economies following the June U.K. vote in favor of leaving the European Union (Brexit) and weaker-than-expected growth in the United States. These developments have put further downward pressure on global interest rates, as monetary policy is now expected to remain accommodative

for longer. Although the market reaction to the Brexit shock was reassuringly orderly, the ultimate impact remains very unclear, as the fate of institutional and trade arrangements between the United Kingdom and the European Union is uncertain. Financial market sentiment toward emerging market economies has improved with expectations of lower interest rates in advanced economies, reduced concern about China's near-term prospects following policy support to growth, and some firming of commodity prices. But prospects differ sharply across countries and regions, with emerging Asia in general and India in particular showing robust growth and sub-Saharan Africa experiencing a sharp slowdown. In advanced economies, a subdued outlook subject to sizable uncertainty and downside risks may fuel further political discontent, with anti-integration policy platforms gaining more traction. Several emerging market and developing economies still face daunting policy challenges in adjusting to weaker commodity prices. These worrisome prospects make the need for a broad-based policy response to raise growth and manage vulnerabilities more urgent than ever.

**5. Subramanian, Arvind**

***Eclipse: Living in the shadow of China's economic dominance / by Arvind Subramanian.. - Washington: Peterson Institute for International Economics, 2011. xvii,216; ISBN : 978-0-88132-606-2. 330.951 Su4E Q1 49729***

**Book Description:** In his new book, Arvind Subramanian presents the following possibilities: What if, contrary to common belief, China's economic dominance is a present-day reality rather than a faraway possibility? What if the renminbi's takeover of the dollar as the world's reserve currency is not decades, but mere years, away? And what if the United States's economic preeminence is not, as many economists and policymakers would like to believe, in its own hands, but China's to determine? Subramanian's analysis is based on a new index of economic dominance grounded in a historical perspective. His examination makes use of real-world examples, comparing China's rise with the past hegemonies of Great Britain and the United States. His attempt to quantify and project economic and currency dominance leads him to the conclusion that China's dominance is not only more imminent, but also broader in scope, and much larger in magnitude, than is currently imagined. He explores the profound effect this might

have on the United States, as well as on the global financial and trade system. Subramanian concludes with a series of policy proposals for other nations to reconcile China's rise with continued openness in the global economic order, and to insure against China becoming a malign hegemon.

## ECONOMIC POLICY

### 6. Persson, Torsten

*Political economics: Explaining economic policy /by Torsten Persson and Guido Tabellini.. - Cambridge: MIT Press, 2002. xix,533;*

*(Zeuthen lecture book series).*

*ISBN : 978-0-262-66131-7.*

*338.9 P43P P2*

*49733*

**Book Description:** What determines the size and form of redistributive programs, the extent and type of public goods provision, the burden of taxation across alternative tax bases, the size of

government deficits, and the stance of monetary policy during the course of business and electoral cycles? A large and rapidly growing literature in political economics attempts to answer these questions. But so far there is little consensus on the answers and disagreement on the appropriate mode of analysis.

Combining the best of three separate traditions—the theory of macroeconomic policy, public choice, and rational choice in political science—Torsten Persson and Guido Tabellini suggest a unified approach to the field. As in modern macroeconomics, individual citizens behave rationally, their preferences over economic outcomes inducing preferences over policy. As in public choice, the delegation of policy decisions to elected representatives may give rise to agency problems between voters and politicians. And, as in rational choice, political institutions shape the procedures for setting policy and electing politicians. The authors outline a common method of analysis, establish several new results, and identify the main outstanding problems.

## ENVIRONMENTAL ECONOMICS

*7. Building a climate resilient economy and society: Challenges and opportunities / edited by K.N. Ninan and Makoto Inoue.. - UK: Edward Elgar, 2017. xxiii,306;*

*ISBN : 978-1-78536-844-8.*

*333.7 N62B Q7*

*49734*

**Book Description:** Climate change will have a profound impact on human and natural systems, and will also impede economic growth and sustainable development. In this book, leading experts from around the world discuss the challenges and opportunities in building a climate resilient economy and society. The chapters are organised in three sections. The first part explores vulnerability, adaptation and resilience, whilst Part II examines climate resilience-sectoral perspectives covering different sectors such as agriculture, fisheries, marine ecosystems, cities and urban infrastructure, drought prone areas, and renewable energy. In the final part, the authors look at Incentives, institutions and policy, including topics such as carbon pricing, REDD plus, climate finance, the role of institutions and communities, and climate policies. Combining a global focus with detailed case studies of a cross section of regions, countries and sectors, this book will prove to be an invaluable resource. Over time, it is expected that climate change will have a profound impact on human and natural systems, and thereby impede future economic growth and sustainable development. In this innovative and authoritative work, leading international experts discuss the challenges and opportunities for building an economy

and society that is more resilient to climate change. Building a Climate Resilient Economy and Society fulfils a long-felt need, which assumed added importance following the Paris Climate Agreement in 2015, for a comprehensive work on climate resilience.

The chapters are organised into three thematic sections. The first part explores vulnerability, adaptation and resilience, whilst Part II offers sectoral perspectives from agriculture, fisheries, marine ecosystems, cities and urban infrastructure, drought prone areas and renewable energy. In the final part, the authors examine incentives, institutions and policy, covering topics such as carbon pricing, REDD-plus, the role of institutions and communities, climate finance and policies. Combining a global focus with detailed case studies from a cross section of regions, countries and sectors, this book will prove to be an invaluable resource for researchers, scholars and students. Written in concise, non-technical language, it will also provide a thorough reference for those in civil society or government working on climate resilience and disaster risk reduction.
